Passenger vehicles.

Evaluation of fuels for automobiles has previously been
made by the octane number. For better comparisons
with other fuels, the determination of knocking limits
or of knocking limit curves, especially in relation to
excess air figures, appears to be of advantage. The
characteristics and knocking behavior of automobile
engines also can not be characterized by a single

DESCRIPTORS: "Fuel oil, Diesel engines, Test
methods, Combustion, Ignition lag, Antiknock.

The basic considerations governing a choice of possible
test methods for diesel fuels are discussed. In evalu-
ating the fuels by engine tests, the processes with
variable compression and with variable ignition lag
were used.
